

ABSTRACT

740 The present invention relates to a washing machine which can selectively
performs a water washing and an oil washing by using one washing tub, wherein the
washing machine has a self-diagnostic function and a communication function.
In accordance with the present invention, the water washing and the oil washing can
be performed with respect to one washing tub by completely removing alien material
and the oil remaining on the washing tub and deterioration of the laundry can be
avoided, while providing economic benefits by using the oil reclaimed by a
745 reclamation process. Further, since the present invention has a self-diagnostic
function and remote maintenance function for assisting the user, it has an advantage
in that the user can easily finish the maintenance in a shorter time.
